

Session Abstracts

Session 1:

Title: Control-M 21 Freedom within the Orchestration Framework

Abstract: Learn how the latest version of Control-M – BMC’s leading application and data workflow orchestration solution – helps IT operations deliver business results faster, by integrating new modern multi-cloud infrastructures and technologies in their workflows. IT operations can offer personalized and secure self-service experiences to all stakeholders, so that they can collaborate within the orchestration framework, in a controlled manner and adhering to organizational best practices. Control-M 21 also helps IT with operational efficiency to adapt, evolve, and modernize quickly.

Session 2:

Title: Orchestrating File Transfers and Related Workflows in Production

Abstract: Even the most modern business outcomes – whether they run on-premises, entirely in the cloud, or in hybrid environments – rely on file transfers. Despite the introduction of many modern cloud provider and data services in your organization, file transfer remains a key part of your business services.

This session will highlight how Control-M continues to simplify the management of your file transfers alongside related non-file transfer workflows supporting the delivery of your critical business services. Topics covered will include:

- Benefits of managing file transfers with Control-M
- Highlights of Control-M’s file transfer management capabilities
- New file transfer management features in Control-M Version 21

Session 3:

Title: Deliver Efficiency and Optimization with Control-M Workflow Insights

Abstract: Learn how Control-M Workflow Insights helps IT operations leaders address common optimization challenges, such as improving workflow stability, shortening business SLAs, and optimizing resource utilization. Workflow Insights provides IT operations, application owners, and business users easy-to-understand dashboards they can use to investigate workflow

performance trends over time and identify optimization actions. The dashboards are built from analytics and telemetry data, recorded as Control-M data and application workflows execute.

Session 4:

Title: Managing Production amid the Constant Requests for New Cloud Services

Abstract: Cloud platforms are quickly becoming the standard for “modern” data centers. That change is being driven, in part, by the broad range of services provided by cloud vendors, especially in the areas of data and compute. As organizations expand the number of services and even the number of cloud vendors they select, production environments are experiencing an explosion of tooling choices resulting in unprecedented complexity.

This session discusses how Control-M helps companies deal with the challenges of running workflows in production when your environment includes cloud vendors (AWS, Azure, Google) and services such as:

- AWS Glue, Step, Batch, EMR, S3 and Lambda
- Azure Data Factory, Logic Apps, HDInsight, Databricks, Functions, Blob Storage and Batch
- Google Cloud Storage, Dataflow, BigQuery, Functions and Dataproc

Session 5:

Title: Optimize and Modernize your Key SAP Processes with Control-M

Abstract: See how Control-M creates and manages SAP ECC, SAP S/4HANA, SAP BW, and data archiving jobs, and supports any application in the SAP ecosystem. Control-M for SAP eliminates time, complexity, and the need for specialized knowledge requirements — and securely manages the dependencies and silos between SAP and non-SAP systems.

Topics covered include:

- How to optimize your SAP OTC, R2R, P2P, S2P, M2D process and modernize SAP S/4HANA cloud platform jobs with effective and efficient controls
- Facilitate and effectively monitor, SAP financial closing processes, payroll postings, record to reporting, Datawarehouse, ETL jobs, and other SAP IT process and critical month end activities
- How to achieve complete control and visibility over SAP business-critical operations and enterprise scalability and power without complexity

- How to optimize and free resource time for future innovative SAP projects and deliverables

Session 6:

Title: Control-M Roadmap: Driving Future Innovation

Abstract: Building on our rich history of continuous innovation, this session explores how Control-M will meet your evolving business modernization initiatives.

Presentation: for legal reasons, the Roadmap session must be delivered by a member of the DBA Solutions Marketing or Product Management teams, and the PowerPoint deck cannot be shared externally. For more information, please contact Alon Lebenthal.
